The Morningstar US Fund Tactical Allocation refers to funds that actively shift their asset allocation between stocks and bonds, aiming to benefit from short-term market trends and potentially generate higher returns than static allocation funds. These funds are characterized by material shifts in sector and/or regional allocations over time.

Risk-Reward

Important Risk Information

Investors should carefully consider the investment objectives, risks, charges, and expenses of the DF Tactical Allocation Fund. This and other information about the Fund is contained in the prospectus and should be read carefully before investing. The prospectus can be obtained by calling toll free 1-877-779-7462. The DF Tactical Income Fund is distributed by Northern Lights Distributors, LLC. Member FINRA/SIPC. Donoghue Forlines LLC is not affiliated with Northern Lights Distributors, LLC.

As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. The net asset value of the Fund will fluctuate based on changes in the value of the equity securities in which it invests. Hedging strategies may not perform as anticipated by the adviser and the Fund could suffer losses by hedging with underlying money market funds if stock prices do not decline. If money market funds are utilized, such Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in Underlying Funds and may be higher than other mutual funds that do not invest in Underlying Funds. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Diversification does not ensure a profit or guarantee against loss. Underlying funds and ETFs are subject to investment advisory fees and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in other mutual funds and ETFs and may be higher than other mutual funds that invest directly in fixed income securities and equities. When the Fund invests in fixed income securities, the value of the Fund will fluctuate with changes in interest rates. Defaults by fixed income issuers in which the Fund invests will also harm performance. Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. International markets present special risks including currency fluctuation, the potential for diplomatic and politically instability, regulatory and liquidity risks, foreign taxation and differences in auditing and other financial standards. The Fund has investment exposure to short-term U.S. Treasury securities through its investment in short-term treasury exchange-traded funds or direct investment in U.S. Treasury securities. All money market instruments, including U.S. Treasury obligations, can change in value in response to changes in interest rates, and a major change in rates could cause the share price to change. While U.S. Treasury obligations are backed by the full faith and credit of the U.S. government, an investment in the Fund is neither insured nor guaranteed by the Federal Deposit Insurance Corporation, U.S. government or any other government agency.

The **DJ Moderately Conservative Index** is for comparison purposes only. The **DJ Moderately Conservative index** is a member of the Dow Jones Relative Risk Index Series and is designed to measure a total portfolio of stocks, bonds, and cash, allocated to represent an investor's desired risk profile.

The inclusion of the **MSCI ACWI NR USD Index** is for comparison purposes only. The **MSCI ACWI Index is a global equity index** designed to track the performance of large and mid-cap stocks across 23 developed and 26 emerging markets. It measures the total return of the index, including dividends, but after deducting withholding taxes on dividends.

The inclusion of the **US Fund Tactical Allocation Morningstar Category** is for comparison purposes only. The **US Fund Tactical Allocation** refers to funds that actively shift their asset allocation between stocks and bonds, aiming to benefit from short-term market trends and potentially generate higher returns than static allocation funds. These funds are characterized by material shifts in sector and/or regional allocations over time. In December 2024, the Fund's primary benchmark index has been changed to the MSCI AC World Index because it is a more appropriate index given the Fund's strategy and portfolio.

Definitions: Tactical overlay is a technique that uses trend following technical indicators to modify a portfolio's risk and return characteristics. **Alpha** refers to an investment's excess return relative to a benchmark index or market average. **Beta** is a measure of an investment's volatility (risk) compared to the overall market. **Max drawdown** is defined as the largest percentage decline an investment experience from its peak value to its lower value before it recovers to that peak again. **Standard deviation** is a statistical measure that indicates how much an investment's return deviates from its average return over a period. **Up capture ratio** is a financial metric used to access how well an investment performs relative to a benchmark index during periods when the market is rising. **Down capture ratio** measures how well an investment manager performs relative to a benchmark index during periods of market decline. **Volatility** refers to the degree of fluctuation or uncertainty in the price of an asset over a specific period.
